PROFESSIONAL SUMMARY

Senior LLM / GenAI Engineer & Tech Lead with **5+ years** of experience across **enterprise payments, NFR/performance , and agentic AI products**. Lead a team of 5 engineers building **code generation platforms, single-click LangChain agents, component test generation, and code-aware knowledge bases** on top of complex brownfield systems. Hands-on with **Python, LangChain, OpenAI, Anthropic, Redis, PostgreSQL, Neo4j, RabbitMQ, AWS**, and observability tools (Dynatrace, AWR), including reducing single-transaction latency from **18s to 2s**. Strong in **LLD/HLD, impact analysis, and partnering with product owners** to turn requirements into production GenAI systems.

WORK EXPERIENCE

Team Lead – LLM / GenAI & Agentic Systems

Apr 2025 - Present

Pratishthan Software Ventures, Bangalore

- Lead a team of 5 building an **infra-level code generation platform** that converts **LLD + configuration** into consistent backend/infra code in one click, aligned with existing architecture patterns.
- Built a **single-click agent creation platform** using **Python, LangChain, OpenAI, Anthropic**, enabling non-experts to create **zero-code LangChain agents** by only editing prompts and configurations.
- Designed a **component test (CT) generation system** using **LLD + chat-based** interaction to generate design- and code-aware component tests that are **isolated from the current production release**, keeping tests stable while development continues.
- Architected a **Neo4j-backed knowledge base** that parses codebases to build a graph of components, relationships, and business flows, supporting **impact analysis and brownfield reuse**.
- Lead development of a **designer assistant for product owners** that collaborates via chat to create **LLDs**, asks one question at a time, and highlights impacted services and APIs using the knowledge base.
- Responsible for **task planning, architecture and design reviews (LLD/HLD), and code reviews** for the GenAI team, working closely with product and architecture stakeholders

Senior Software Engineer – Payments and NFR

Apr 2023 - Mar 2025

Pratishthan Software Ventures, Bangalore

- Drove a key **NFR initiative** that reduced single-transaction latency from **18 seconds to 2 seconds** by analyzing production logs, identifying inconsistent issues, and resolving non-functional problems across multiple payment platforms
- Tuned database, caching, and messaging layers based on **Dynatrace and AWR** insights to systematically eliminate performance hotspots and stabilize end-to-end transaction times
- Enabled **pooling in IBM MQ** and configured **authentication and authorization in Redis**, improving throughput and reliability for SWIFT and faster payment services.
- Designed **SWIFT architecture** and integrated existing modules into a dedicated **SWIFT microservice**; worked on **Payment Card Plugin** for any banking digital platform for international transactions.
- Built internal **GenAI tools for log analysis and pattern recognition** using LLMs (OpenAI/ChatGPT) to speed up inconsistent issue detection and improve SLA adherence.

- Created and reviewed technical documents to assess the **impact of new features** on existing services; handled production defects and deployment-related issue
- Contributed to SWIFT microservices architecture by **integrating existing modules, reviewing technical design documents** for feature impact, and supporting production defect and deployment issue resolution.

Software Engineer – Payments & Microservices

Jan 2021 - Mar 2023

Pratishthan Software Ventures, Bangalore

- Designed and developed **UK Faster Payment System (UKFPS)** microservices and REST APIs for UK banks.
- Led design, development, production rollout, and live bug fixing for **HKFPS**, ensuring **NFR** and operational requirements were met.
- Implemented services using **Node.js, RabbitMQ** for data streaming, and **Redis + PostgreSQL** for data storage.
- Developed a **standing instruction payment service** for mandates and integrated it into existing payment modules.
- Contributed to **SWIFT**-related services and enhancements within **large-scale payment** platforms.

SKILLS

- | | | | |
|--------------|-----------------|-------------|----------|
| • LLM | • Generative AI | • Langchain | • RAG |
| • Tensorflow | • AWS | • Neo4j | • Python |
| • NodeJS | • PostgresSql | • RabbitMQ | • Redis |

EDUCATION

Bachelor of Engineering in Information Technology	Singhad Institute of Technology	Apr, 2020
Senior Secondary	SBBG Inter College	Apr, 2016
Secondary	The Jain International School	Apr, 2013
